System information

Copy and Print. Quick and Easy

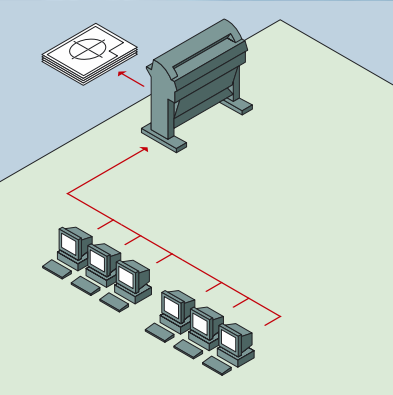

Entry level wide format copy and print system

Copy and Print. Quick and Easy

Choosing a printing system for a small technical enterprise or a workgroup in a larger organisation is tricky. Inkjets are slow and expensive to run, and if you need copies as well it means buying an analogue copier in addition. Now that choice is easier. The Océ TDS300, available in printer or copier-printer versions, produces high quality documents fast. Making it ideal for smaller workloads.

High quality prints delivered quickly

With the printer version of the Océ TDS300, low volume doesn't mean low performance. 600 dpi print quality results in check plots and drawings that look every bit as good as those produced on more advanced systems. At 1.8 A0 impressions a minute, the Océ TDS300 is twice as fast as the best inkjet printers. And it gives you a quicker return on your investment as well.

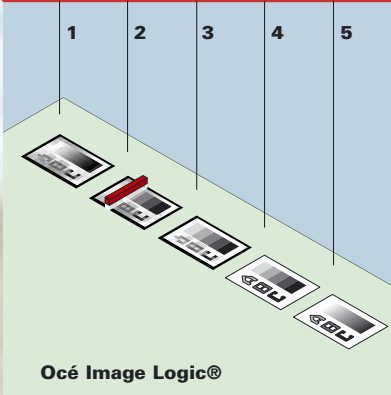

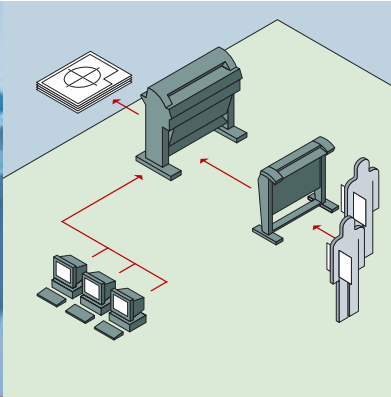

Outstanding productivity guaranteed

In demanding workgroups, it's often the printer that restricts your productivity. Not the Océ TDS300. It supports a range of high-performance print drivers making job submission fast and

simple. The Océ Power Logic® Controller offers concurrent processing so it can manage several print jobs at once. And with two online rolls it handles every wide format size.

The Océ TDS300 also offers flexibility. When and if you are ready, you can easily upgrade the system to the copier-printer version.

- 1 Original
- 2 Scanning
- 3 Automatic background compensation removes unwanted background
- 4 Filtering sharpens text and lines
- 5 Halftoning guarantees smooth gradients

Océ Image Logic®

The digital copier that can print

If you need both quick check plots and wide format copies, why use a slow, expensive-to-run inkjet printer alongside an analogue copier? The Océ TDS300 copier-printer combines both functions in a fast, productive and easy-to-use digital system.

With the Océ Power Logic® Controller you get a noticeable boost in efficiency. It's concurrent processing power means you can copy while printing. And there's no need to change your work routines to accommodate the system either. The Océ TDS300 copier-printer fits the way you work today.

Perfect copies when you need them

The Océ Green Button approach makes it easy to produce perfect copies on the Océ TDS300 copier-printer. Even with

the most difficult originals, Océ Image Logic® automatically enhances image quality so copies come out right first time. The system also zooms from 25 to 400 per cent so you can reduce large prints to a handy size for use on a building site or another external location. And with no warm-up time the Océ TDS300 is always ready for use.

Go with the industry leader

Both versions of the Océ TDS300 are based on innovative and proven technology from Océ, the world's leading supplier of wide format printing systems. And you can always count on Océ for support. Not just when things go wrong but also when driver and software updates become available. As a result, you can look forward to years of value from your investment.
